Experience

OpenAI

1 yr 9 mos

- **International Startups Lead**

May 2025 — current

Sora

- Deployed global scale infrastructure and services to teams across the world build the apps of the future.
- Presented technical proposals to executive leadership, securing \$5M budget approval for infrastructure modernization initiative spanning two fiscal years.

- **Software Engineering Lead**

Jan 2025 — May 2025

GPT-4

- Developed automated testing framework using Python and Selenium, reducing manual testing time by 60% and improving code coverage across three major product releases while mentoring two junior engineers on best practices.
- Led cross-functional team of 8 engineers to deliver cloud migration project two weeks ahead of schedule, resulting in 40% reduction in infrastructure costs.
- Implemented machine learning algorithm for predictive maintenance that decreased equipment downtime by 35% and saved approximately \$200,000 annually in operational expenses.

- **Senior Software Engineer**

Feb 2024 — Jan 2025

GPT-4

- Designed and deployed microservices architecture using Docker and Kubernetes, improving system scalability and reducing deployment time from hours to minutes.
- Collaborated with product managers to define technical requirements for new mobile application, successfully launching to 50,000 users within first month.
- Optimized database queries and indexing strategies, resulting in 70% improvement in application response time and enhanced user experience across platform.
- Spearheaded adoption of CI/CD pipeline using Jenkins and GitLab, automating build and deployment processes for 15 repositories.

Palantir

5 mos

- **Forward Deployed Engineer**

Sep 2023 — Feb 2024

Palantir

- Built data visualization dashboards using Tableau and PowerBI, enabling stakeholders to make data-driven decisions and track key performance indicators.
- Researched emerging technologies and presented findings to leadership team, influencing technology stack decisions for next-generation product development roadmap.

GitHub

1 vr 1 mo

- **Full Stack Software Engineer**

Mar 2023 — Sep 2023

GitHub Copilot

- Developed automated testing framework using Python and Selenium, reducing manual testing time by 60% and improving code coverage across three major product releases while mentoring two junior engineers on best practices.
- Led cross-functional team of 8 engineers to deliver cloud migration project two weeks ahead of schedule, resulting in 40% reduction in infrastructure costs.
- Implemented machine learning algorithm for predictive maintenance that decreased equipment downtime by 35% and saved approximately \$200,000 annually in operational expenses.

- Implemented security best practices including encryption, authentication protocols, and vulnerability scanning, achieving SOC 2 compliance for organization.
- Automated deployment processes using Terraform and Ansible, reducing configuration errors by 80% and improving infrastructure consistency.

•

Engineering Intern

Aug 2022 — Mar 2023

GitHub Codespaces

- Designed and deployed microservices architecture using Docker and Kubernetes, improving system scalability and reducing deployment time from hours to minutes.
- Collaborated with product managers to define technical requirements for new mobile application, successfully launching to 50,000 users within first month.
- Optimized database queries and indexing strategies, resulting in 70% improvement in application response time and enhanced user experience across platform.
- Spearheaded adoption of CI/CD pipeline using Jenkins and GitLab, automating build and deployment processes for 15 repositories.

Qualifications

Qualification	Grade	Date	Institution
Mathematics	1st	—	University of Exeter
Machine Learning	—	09-2023	Microsoft Azure
Artificial Intelligence	1st	02-2025	OpenAI
